Journal of Materials Processing Technology

www.elsevier.com/locate/jmatprotec

# Subject Index of Volume 111

A356
Electromagnetic stirring and Sr modification in A356 alloy, 69
A2 tool steel
Evolution of the tribological characteristics of several forming die materials, 20
Acoustic emission (AE)
Process monitoring of centerless grinding using acoustic emission, 273
Adaptive grid
Application of an adaptive grid refinement technique to three-dimensional finite element analysis of the filling stage in the die-casting process, 59
AE monitoring system
Process monitoring of centerless grinding using acoustic emission, 273
7075 Al
Characterization of Al 7075 alloys after cold working and heating in the semi-solid temperature range, 42
(Al, Ti)N-coated carbide tool
Basic study of ball end milling on hardened steel, 240
Alloy 718
Hot forging of a nickel-base superalloy, 98
Aluminum brazing sheet
Fabrication and brazeability of a three-layer 4343/3003/4343 aluminum clad sheet by rolling, 85
Aluminum-killed drawing quality (AKDQ) sheet steel
Evolution of the tribological characteristics of several forming die materials, 20
Approximate deformation analysis
An approximate deformation analysis and FEM analysis for the incremental bulging of sheet metal using a spherical roller, 150
Arbitrary Lagrangian–Eulerian description
Integrated finite element simulation for the hot extrusion of complicated Al alloy profiles, 25
Automotive condenser
Fabrication and brazeability of a three-layer 4343/3003/4343 aluminum clad sheet by rolling, 85
Axisymmetric dies
Use of UBET for design of flash gap in closed-die forging, 107

Backward deformation analysis
Computer aided design of rolls for reshaping processes from round pipes to "channel-type" pipes, 193
Backward tracing scheme
Implementation of backward tracing scheme of the FEM to blank design in sheet metal forming, 90
Ball end milling
Basic study of ball end milling on hardened steel, 240
Bead-exit thinning
Application of an expert drawbead model to the finite element simulation of sheet forming processes, 155
Bifurcation
Investigation into wrinkling behavior in the elliptical cup deep drawing process by finite element analysis using bifurcation theory, 170
Birefringence
Modeling and numerical simulation of residual stresses and birefringence in injection molded center-gated disks, 214
Blanking
Development of an integrated computer-aided process planning system for press working products, 188
Boundary condition
Aspects of forging of titanium alloys and the production of blade forms, 10
Brazeability
Fabrication and brazeability of a three-layer 4343/3003/4343 aluminum clad sheet by rolling, 85
Broadside rolling
Application of neural networks to predict the width variation in a plate mill, 146

CAD/CAM
Chip load prediction in ball-end milling, 250
CCT diagram
Microstructure and properties of spray formed $Cr_{12}MoV$ steel for rolls, 79
Centerless grinding
Process monitoring of centerless grinding using acoustic emission, 273
Ceramic injection molding
Melt front surface asperity and welding-defect generation in ceramic injection molding, 219
Closed-die forging
Use of UBET for design of flash gap in closed-die forging, 107
Cold roll forming
Computer aided design of rolls for reshaping processes from round pipes to "channel-type" pipes, 193
Cold rolling
Fabrication and brazeability of a three-layer 4343/3003/4343 aluminum clad sheet by rolling, 85
Friction measurement in cold rolling, 142
Cold working methods
Characterization of Al 7075 alloys after cold working and heating in the semi-solid temperature range, 42
Compressed chilly-air system
Evaluation of machinability by cutting environments in high-speed milling of difficult-to-cut materials, 256
Compressed cold air
A comparison of the cooling effects of compressed cold air and coolant for cylindrical grinding with a CBN wheel, 265
Compressible viscoplasticity
The Al-powder forging process: its finite element analysis, 204
Compression molding
A study on fiber orientation in the compression molding of fiber reinforced polymer composite material, 233

Elsevier Science B.V.
PII: S0924-0136(01)00690-2

Copper powder
Experiment on metal powder compaction by differential speed rolling, 113
Cost and time savings
A hydraulic high-speed tryout press for the simulation of mechanical forming processes, 159
Counter-flow joining
Melt front surface asperity and welding-defect generation in ceramic injection molding, 219
$Cr_{12}MoV$
Microstructure and properties of spray formed $Cr_{12}MoV$ steel for rolls, 79
Cutting force
Basic study of ball end milling on hardened steel, 240
Improvement of the accuracy in the machining of a deep shoulder cut by end milling, 244
Chip load prediction in ball-end milling, 250
Cutting surface model
Chip load prediction in ball-end milling, 250

Deep drawing
Characteristics of weld line movements for the deep drawing with drawbeads of tailor-welded blanks, 164
Deep drawing process
Design and application of pliable blank holder systems for the optimization of process conditions in sheet metal forming, 182
Deformation resistance
Extrusion of nickel–titanium alloys Nitinol to hollow shapes, 122
Density relaxation
Modeling and numerical simulation of residual stresses and birefringence in injection molded center-gated disks, 214
Development
A hydraulic high-speed tryout press for the simulation of mechanical forming processes, 159
Die
A hydraulic high-speed tryout press for the simulation of mechanical forming processes, 159
Die lands
Integrated finite element simulation for the hot extrusion of complicated Al alloy profiles, 25
Die materials
Evolution of the tribological characteristics of several forming die materials, 20
Die temperature
Thixoforming of an aluminum component with a die designed by process simulation, 37
Die-casting process
Application of an adaptive grid refinement technique to three-dimensional finite element analysis of the filling stage in the die-casting process, 59
Differential speed rolling
Experiment on metal powder compaction by differential speed rolling, 113
Difficult-to-cut materials
Evaluation of machinability by cutting environments in high-speed milling of difficult-to-cut materials, 256
3-DOF
A study on the kinematics and dynamics of a 3-DOF parallel machine tool, 269
Domain decomposition
Integrated finite element simulation for the hot extrusion of complicated Al alloy profiles, 25
Down milling
Improvement of the accuracy in the machining of a deep shoulder cut by end milling, 244
Drawbead
Application of an expert drawbead model to the finite element simulation of sheet forming processes, 155
Drawbead restraining force
Application of an expert drawbead model to the finite element simulation of sheet forming processes, 155
Drawing
A hydraulic high-speed tryout press for the simulation of mechanical forming processes, 159
Dressing process
Process monitoring of centerless grinding using acoustic emission, 273
Drive system
A hydraulic high-speed tryout press for the simulation of mechanical forming processes, 159
Dynamic recrystallization
Hot forging of a nickel-base superalloy, 98
Dynamics
A study on the kinematics and dynamics of a 3-DOF parallel machine tool, 269

Electromagnetic stirring
Electromagnetic stirring and Sr modification in A356 alloy, 69
End mill
Improvement of the accuracy in the machining of a deep shoulder cut by end milling, 244
Energy partition
Study on heat transfer in super-high-speed grinding: energy partition to the workpiece in HEDG, 261
Eutectic Si
Electromagnetic stirring and Sr modification in A356 alloy, 69
Expert model
Application of an expert drawbead model to the finite element simulation of sheet forming processes, 155
Extruded length
An UBET analysis of the non-axisymmetric extrusion/forging process, 135
Extrusion/forging
An UBET analysis of the non-axisymmetric extrusion/forging process, 135

FEM
An approximate deformation analysis and FEM analysis for the incremental bulging of sheet metal using a spherical roller, 150
FEM-simulation
Design and application of pliable blank holder systems for the optimization of process conditions in sheet metal forming, 182
Fiber orientation
A study on fiber orientation in the compression molding of fiber reinforced polymer composite material, 233
Fiber orientation function
A study on fiber orientation during the injection molding of fiber-reinforced polymeric composites. (Comparison between image processing results and numerical simulation), 225
Fiber separation
A study on fiber orientation in the compression molding of fiber reinforced polymer composite material, 233
Filling stage
Application of an adaptive grid refinement technique to three-dimensional finite element analysis of the filling stage in the die-casting process, 59
Finishing rolling
Application of neural networks to predict the width variation in a plate mill, 146
Finite element method
Integrated finite element simulation for the hot extrusion of complicated Al alloy profiles, 25

Implementation of backward tracing scheme of the FEM to blank design in sheet metal forming, 90
A study on the optimal tool shape design in a hot forming process, 127
Investigation into wrinkling behavior in the elliptical cup deep drawing process by finite element analysis using bifurcation theory, 170
Finite element simulation
Aspects of forging of titanium alloys and the production of blade forms, 10
Application of an expert drawbead model to the finite element simulation of sheet forming processes, 155
Flash gap
Use of UBET for design of flash gap in closed-die forging, 107
Flexible forming
An approximate deformation analysis and FEM analysis for the incremental bulging of sheet metal using a spherical roller, 150
Flow guide
Integrated finite element simulation for the hot extrusion of complicated Al alloy profiles, 25
Forging
Aspects of forging of titanium alloys and the production of blade forms, 10
Hot forging of a nickel-base superalloy, 98
Forming behaviour
A hydraulic high-speed tryout press for the simulation of mechanical forming processes, 159
Forming load
An UBET analysis of the non-axisymmetric extrusion/forging process, 135
Forming parameters
Experimental investigation of the forming parameters of the rotational upset forging process, 103
Forward deforamtion analysis
Computer aided design of rolls for reshaping processes from round pipes to "channel-type" pipes, 193
Forward slip
Friction measurement in cold rolling, 142
Free volume theory
Modeling and numerical simulation of residual stresses and birefringence in injection molded center-gated disks, 214
Friction
Evolution of the tribological characteristics of several forming die materials, 20
Friction measurement in cold rolling, 142

Galvannealed sheet steel
Evolution of the tribological characteristics of several forming die materials, 20
Grain size control
Hot forging of a nickel-base superalloy, 98
Grinding
Study on heat transfer in super-high-speed grinding: energy partition to the workpiece in HEDG, 261
Grinding speed
Study on heat transfer in super-high-speed grinding: energy partition to the workpiece in HEDG, 261
Grinding state monitoring
Process monitoring of centerless grinding using acoustic emission, 273

Hardenability
Microstructure and properties of spray formed $Cr_{12}MoV$ steel for rolls, 79
Hardened steel
Basic study of ball end milling on hardened steel, 240
Heat transfer
Study on heat transfer in super-high-speed grinding: energy partition to the workpiece in HEDG, 261
High speed machining
Evaluation of machinability by cutting environments in high-speed milling of difficult-to-cut materials, 256
The integration of rapid prototyping and CAE in mould manufacturing, 279
Hot extrusion
Integrated finite element simulation for the hot extrusion of complicated Al alloy profiles, 25
Extrusion of nickel–titanium alloys Nitinol to hollow shapes, 122
Hot forging
Characterization of Al 7075 alloys after cold working and heating in the semi-solid temperature range, 42
Development of an integrated computer-aided process planning system for press working products, 188
Hot strip mill
Hot strip width control method by using looper tension measuring system in finishing mill, 74
Hot-dipped galvanized sheet steel
Evolution of the tribological characteristics of several forming die materials, 20
Hydraulic high-speed tryout press
A hydraulic high-speed tryout press for the simulation of mechanical forming processes, 159

Image processing
A study on fiber orientation during the injection molding of fiber-reinforced polymeric composites. (Comparison between image processing results and numerical simulation), 225
Inclined angle
Study on heat transfer in super-high-speed grinding: energy partition to the workpiece in HEDG, 261
Incremental forming
An approximate deformation analysis and FEM analysis for the incremental bulging of sheet metal using a spherical roller, 150
Injection molding
Modeling and numerical simulation of residual stresses and birefringence in injection molded center-gated disks, 214
A study on fiber orientation during the injection molding of fiber-reinforced polymeric composites. (Comparison between image processing results and numerical simulation), 225
Injection moulding simulations
The integration of rapid prototyping and CAE in mould manufacturing, 279
Intermediate annealing
Fabrication and brazeability of a three-layer 4343/3003/4343 aluminum clad sheet by rolling, 85

Jetting in sprue
Melt front surface asperity and welding-defect generation in ceramic injection molding, 219
Joining
Method of joining sheets by using new type rivets, 198
Joining strength
Method of joining sheets by using new type rivets, 198
Joint making property
Method of joining sheets by using new type rivets, 198

KAVF
An UBET analysis of the non-axisymmetric extrusion/forging process, 135
Kinematics
A study on the kinematics and dynamics of a 3-DOF parallel machine tool, 269

Knowledge-based rules
Development of an integrated computer-aided process planning system for press working products, 188

Laser
The manufacturing of hard tools from metallic powders by selective laser melting, 210
Laser welding
Characteristics of weld line movements for the deep drawing with drawbeads of tailor-welded blanks, 164
Liquid segregation
Thixoforming of an aluminum component with a die designed by process simulation, 37
Long fiber-reinforced polymeric composites
A study on fiber orientation during the injection molding of fiber-reinforced polymeric composites. (Comparison between image processing results and numerical simulation), 225
Looper control
Hot strip width control method by using looper tension measuring system in finishing mill, 74

Z-map
Chip load prediction in ball-end milling, 250
Marker surface method
Application of an adaptive grid refinement technique to three-dimensional finite element analysis of the filling stage in the die-casting process, 59
Mechanical alloying (MA)
Formation of a $TiN/Ti_5Si_3$ nano-grain composite by a non-equilibrium PM process, 118
Mechanical properties
Characterization of Al 7075 alloys after cold working and heating in the semi-solid temperature range, 42
Melt drag belt-roll caster
Semi-solid roll casting of aluminum alloy strip by melt drag twin roll caster, 64
Melt drag twin roll caster
Semi-solid roll casting of aluminum alloy strip by melt drag twin roll caster, 64
Melt front asperity
Melt front surface asperity and welding-defect generation in ceramic injection molding, 219
Melting
The manufacturing of hard tools from metallic powders by selective laser melting, 210
Meta-dynamic recrystallization
Hot forging of a nickel-base superalloy, 98
Metal forming process
A study on the optimal tool shape design in a hot forming process, 127
Metallic powders
The manufacturing of hard tools from metallic powders by selective laser melting, 210
Microstructure
Microstructure and properties of spray formed $Cr_{12}MoV$ steel for rolls, 79
Characterization of Al 7075 alloys after cold working and heating in the semi-solid temperature range, 42
Mismatching refinement
Integrated finite element simulation for the hot extrusion of complicated Al alloy profiles, 25

Neural network
Application of neural networks to predict the width variation in a plate mill, 146
Nickel electroforming
Development of rapid tooling for sheet metal drawing using nickel electroforming and stereolithography processes, 286
Nitinol
Extrusion of nickel–titanium alloys Nitinol to hollow shapes, 122
Non-dendritic alloy slurries
Investigation into the rapid compression of semi-solid alloy slugs, 31
Non-equilibrium PM process
Formation of a $TiN/Ti_5Si_3$ nano-grain composite by a non-equilibrium PM process, 118
Non-linear spring characteristic
Development of a new-type suspension spring for rally cars, 132
Non-traditional machining
An approximate deformation analysis and FEM analysis for the incremental bulging of sheet metal using a spherical roller, 150
Numerical simulation
A study on fiber orientation during the injection molding of fiber-reinforced polymeric composites. (Comparison between image processing results and numerical simulation), 225

Optimal tool shape
A study on the optimal tool shape design in a hot forming process, 127
Orientation tensor
A study on fiber orientation in the compression molding of fiber reinforced polymer composite material, 233
Overflow position
Thixoforming of an aluminum component with a die designed by process simulation, 37

Parallel machine tool
A study on the kinematics and dynamics of a 3-DOF parallel machine tool, 269
Plastic working
Method of joining sheets by using new type rivets, 198
Plate mill
Application of neural networks to predict the width variation in a plate mill, 146
Pliable blank holder
Design and application of pliable blank holder systems for the optimization of process conditions in sheet metal forming, 182
Porthole die
Integrated finite element simulation for the hot extrusion of complicated Al alloy profiles, 25
Powder forging process
The Al-powder forging process: its finite element analysis, 204
Powder forming
Experiment on metal powder compaction by differential speed rolling, 113
Preform design
Implementation of backward tracing scheme of the FEM to blank design in sheet metal forming, 90
Press characteristics
A hydraulic high-speed tryout press for the simulation of mechanical forming processes, 159
Pressing force
Thixoforming of an aluminum component with a die designed by process simulation, 37
Process design
Computer aided design of rolls for reshaping processes from round pipes to "channel-type" pipes, 193
Production
The integration of rapid prototyping and CAE in mould manufacturing, 279
Rapid compression
Investigation into the rapid compression of semi-solid alloy slugs, 31

Rapid prototyping
The manufacturing of hard tools from metallic powders by selective laser melting, 210
The integration of rapid prototyping and CAE in mould manufacturing, 279
Rapid tooling
Development of rapid tooling for sheet metal drawing using nickel electroforming and stereolithography processes, 286
Rectangular wire helical spring
Development of a new-type suspension spring for rally cars, 132
Relative density
Experiment on metal powder compaction by differential speed rolling, 113
The Al-powder forging process: its finite element analysis, 204
Reproducibility
A hydraulic high-speed tryout press for the simulation of mechanical forming processes, 159
Reshaping process
Computer aided design of rolls for reshaping processes from round pipes to "channel-type" pipes, 193
Residual stress
A comparison of the cooling effects of compressed cold air and coolant for cylindrical grinding with a CBN wheel, 265
Modeling and numerical simulation of residual stresses and birefringence in injection molded center-gated disks, 214
Rheological data
Different concepts of thixoforging and experiments for rheological data, 48
Rheology
Investigation into the rapid compression of semi-solid alloy slugs, 31
Rheological modelling on semi-solid metal alloys and simulation of thixocasting processes, 53
Riveting
Method of joining sheets by using new type rivets, 198
Roll casting
Semi-solid roll casting of aluminum alloy strip by melt drag twin roll caster, 64
Roll design
Computer aided design of rolls for reshaping processes from round pipes to "channel-type" pipes, 193
Rolling load
Experiment on metal powder compaction by differential speed rolling, 113
Rotary draw bending
The tube bending technology of a hydroforming process for an automotive part, 175
Rotational upset forging
Experimental investigation of the forming parameters of the rotational upset forging process, 103

Semi-solid
Semi-solid roll casting of aluminum alloy strip by melt drag twin roll caster, 64
Electromagnetic stirring and Sr modification in A356 alloy, 69
Semi-solid materials
Rheological modelling on semi-solid metal alloys and simulation of thixocasting processes, 53
Sensor roll
Friction measurement in cold rolling, 142
Sheet metal
Method of joining sheets by using new type rivets, 198
Sheet metal drawing
Development of rapid tooling for sheet metal drawing using nickel electroforming and stereolithography processes, 286
Sheet metal forming
Implementation of backward tracing scheme of the FEM to blank design in sheet metal forming, 90
An approximate deformation analysis and FEM analysis for the incremental bulging of sheet metal using a spherical roller, 150
Application of an expert drawbead model to the finite element simulation of sheet forming processes, 155
Design and application of pliable blank holder systems for the optimization of process conditions in sheet metal forming, 182
Sheet metal forming process
Investigation into wrinkling behavior in the elliptical cup deep drawing process by finite element analysis using bifurcation theory, 170
SIMA process
Characterization of Al 7075 alloys after cold working and heating in the semi-solid temperature range, 42
Simulation
Rheological modelling on semi-solid metal alloys and simulation of thixocasting processes, 53
A hydraulic high-speed tryout press for the simulation of mechanical forming processes, 159
Sintered preform
The Al-powder forging process: its finite element analysis, 204
Slide tilting
A hydraulic high-speed tryout press for the simulation of mechanical forming processes, 159
Speed profile
A hydraulic high-speed tryout press for the simulation of mechanical forming processes, 159
Spotting
A hydraulic high-speed tryout press for the simulation of mechanical forming processes, 159
Spray forming
Microstructure and properties of spray formed $Cr_{12}MoV$ steel for rolls, 79
Sr modification
Electromagnetic stirring and Sr modification in A356 alloy, 69
Stereolithography
Development of rapid tooling for sheet metal drawing using nickel electroforming and stereolithography processes, 286
Strain distribution
Characteristics of weld line movements for the deep drawing with drawbeads of tailor-welded blanks, 164
Strip casting
Semi-solid roll casting of aluminum alloy strip by melt drag twin roll caster, 64
Strip tension
Hot strip width control method by using looper tension measuring system in finishing mill, 74
Strip thickness
Experiment on metal powder compaction by differential speed rolling, 113
Surface accuracy
Improvement of the accuracy in the machining of a deep shoulder cut by end milling, 244
Surface roughness
A comparison of the cooling effects of compressed cold air and coolant for cylindrical grinding with a CBN wheel, 265
Suspension spring
Development of a new-type suspension spring for rally cars, 132

Tailor-welded blanks
Characteristics of weld line movements for the deep drawing with drawbeads of tailor-welded blanks, 164
Tension measuring system
Hot strip width control method by using looper tension measuring system in finishing mill, 74

Tetragonality of martensite
Microstructure and properties of spray formed $Cr_{12}MoV$ steel for rolls, 79
Thermal defects
A comparison of the cooling effects of compressed cold air and coolant for cylindrical grinding with a CBN wheel, 265
Thixo transverse impact extrusion
Different concepts of thixoforging and experiments for rheological data, 48
Thixoforging
Characterization of Al 7075 alloys after cold working and heating in the semi-solid temperature range, 42
Different concepts of thixoforging and experiments for rheological data, 48
Thixoforming
Investigation into the rapid compression of semi-solid alloy slugs, 31
Thixoforming of an aluminum component with a die designed by process simulation, 37
Different concepts of thixoforging and experiments for rheological data, 48
Rheological modelling on semi-solid metal alloys and simulation of thixocasting processes, 53
$TiN/Ti_5Si_3$ composite
Formation of a $TiN/Ti_5Si_3$ nano-grain composite by a non-equilibrium PM process, 118
Titanium
Aspects of forging of titanium alloys and the production of blade forms, 10
Titanium nitride coated
Evolution of the tribological characteristics of several forming die materials, 20
Tool deflection
Improvement of the accuracy in the machining of a deep shoulder cut by end milling, 244
Tool design
Extrusion of nickel–titanium alloys Nitinol to hollow shapes, 122
Tool life
Basic study of ball end milling on hardened steel, 240
Evaluation of machinability by cutting environments in high-speed milling of difficult-to-cut materials, 256
Tool making
The manufacturing of hard tools from metallic powders by selective laser melting, 210
Tool stresses
Extrusion of nickel–titanium alloys Nitinol to hollow shapes, 122
Tube bending
The tube bending technology of a hydroforming process for an automotive part, 175
Tube hydroforming
The tube bending technology of a hydroforming process for an automotive part, 175
Tungsten carbide
Evolution of the tribological characteristics of several forming die materials, 20
Twisting torque
Experimental investigation of the forming parameters of the rotational upset forging process, 103

UBET
Use of UBET for design of flash gap in closed-die forging, 107
An UBET analysis of the non-axisymmetric extrusion/forging process, 135
Uniform microstructure
A study on the optimal tool shape design in a hot forming process, 127
Up milling
Improvement of the accuracy in the machining of a deep shoulder cut by end milling, 244

Vitrified bond CBN wheel
A comparison of the cooling effects of compressed cold air and coolant for cylindrical grinding with a CBN wheel, 265
Volume of fluid (VOF) method
Application of an adaptive grid refinement technique to three-dimensional finite element analysis of the filling stage in the die-casting process, 59
Volumetric deformation
The Al-powder forging process: its finite element analysis, 204
Vortex tube
A comparison of the cooling effects of compressed cold air and coolant for cylindrical grinding with a CBN wheel, 265

Wear
Evolution of the tribological characteristics of several forming die materials, 20
Weld line movement
Characteristics of weld line movements for the deep drawing with drawbeads of tailor-welded blanks, 164
Weld overlay
Evolution of the tribological characteristics of several forming die materials, 20
Welding defects
Melt front surface asperity and welding-defect generation in ceramic injection molding, 219
Welding-defect elimination criterion
Melt front surface asperity and welding-defect generation in ceramic injection molding, 219
Width deviation
Hot strip width control method by using looper tension measuring system in finishing mill, 74
Width variation
Application of neural networks to predict the width variation in a plate mill, 146
Wrinkling
Investigation into wrinkling behavior in the elliptical cup deep drawing process by finite element analysis using bifurcation theory, 170

Zirconia
Evolution of the tribological characteristics of several forming die materials, 20
